STEM694 STEM Special Topics for Graduate Students (3 semester hours)

Special Topics courses are offered occasionally, in response to student interest, on emerging topics. These courses are limited in their offerings and scope, and the format will vary based on the student interest and the topics to be covered. Enrollment by Program Director approval.

View the course schedule (<https://www.apus.edu/course-schedule/details.html?c=STEM694>) to find out details about each course including prerequisites, course objectives, course materials, a snapshot of the syllabi, and session dates.

STEM695 STEM Internship for Graduate Students (3 semester hours)

Participating in an internship provides students with a valuable educational and professional opportunity. During internships, students explore and gain hands on experience in a field they have an interest in working within. Within the School of Science, Technology, Engineering, and Math the primary responsibility for finding an internship belongs to the student, however there are a number of resources in place to help you in your search, and with the application process.
