

# Undergraduate NanoCerts™

Undergraduate NanoCerts™ are focused programs which provide skills necessary for career or professional development and result in a marketable microcredential. Academic credits earned while obtaining an undergraduate NanoCert may be applied to a certificate, associate or bachelor's degree.\* NanoCerts present you an opportunity to upskill while gaining nine academic credits toward your future pursuits.

**Note:** Students may not use military tuition assistance, the GI Bill, or federal student aid to pay for NanoCert courses. However, private financing or employer tuition assistance may be used.

\*Students are not permitted to enroll concurrently in multiple programs. For example, you may not be enrolled in both a NanoCert and a Bachelor's degree at the same time. However, if you previously completed the NanoCert in Cybersecurity/Cybercrime you may be able to apply those credits toward a Bachelor's in Cybersecurity.
